

RESOLUTION

C O P P E R

CONSERVING ARIZONA'S WATER.

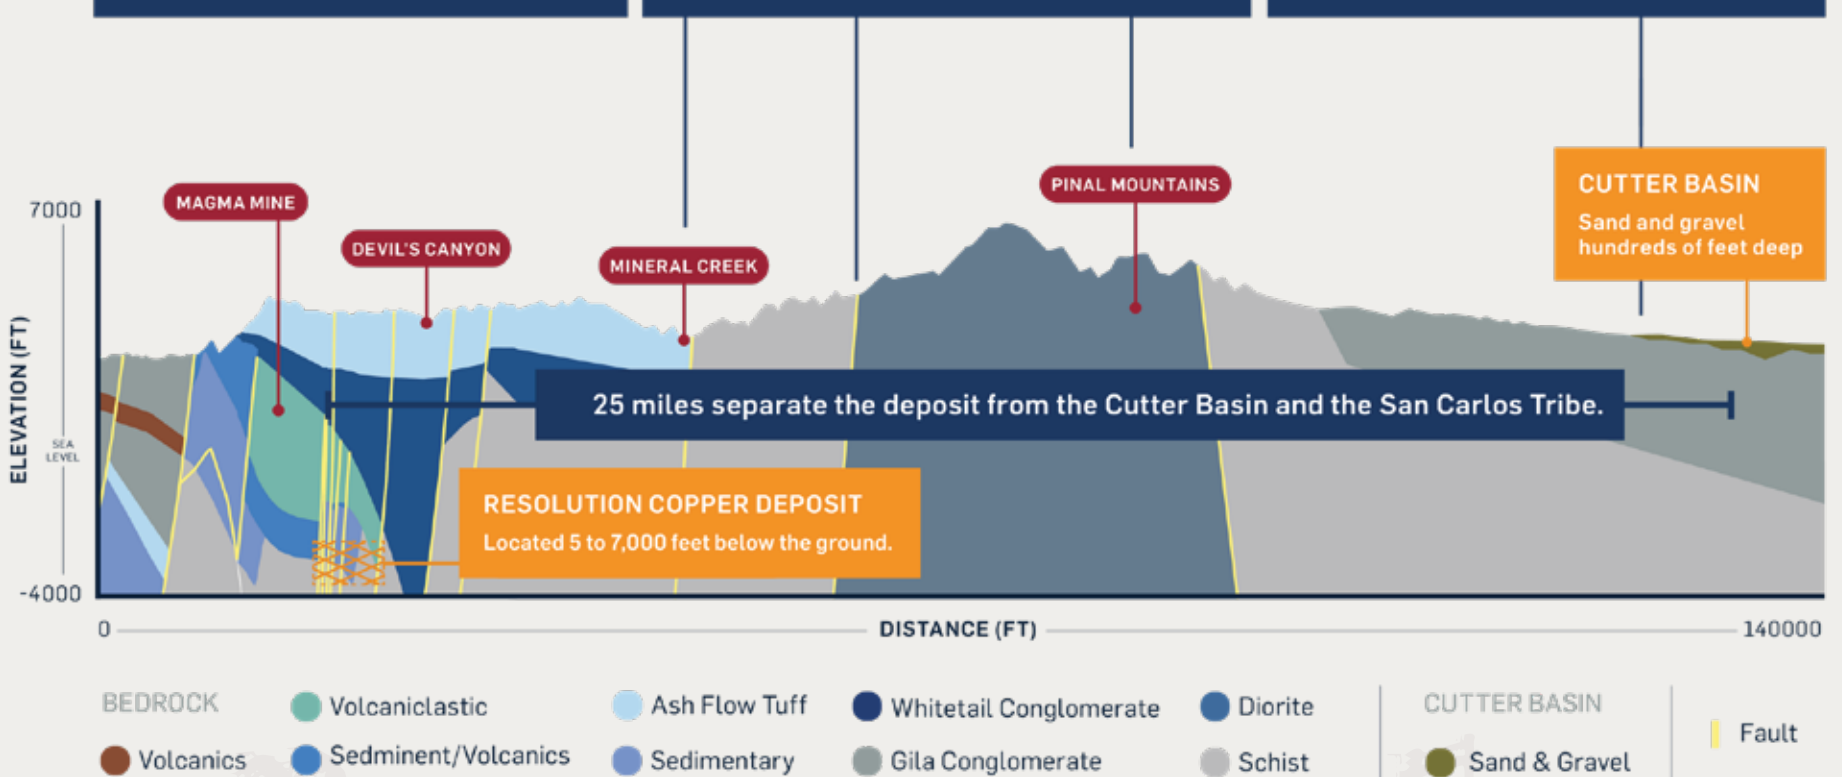

Resolution Copper is committed to responsible water use and to protecting water resources important to the region. We supply recycled water to local farmers--meaning less pumping and more water staying in the ground. We will be applying the latest technology to reduce water consumption and will be the most water efficient mine in Arizona . Our water supply is geographically separate from the Cutter Basin. We cannot and do not withdraw water from the San Carlos Apache Reservation or the Cutter Basin.

Resolution Copper does not and will not withdraw water from the San Carlos Apache Reservation or the Cutter Basin.

Resolution Copper deposit and Cutter Basin have a completely different type of geology.

The deposit and Cutter Basin are separated by extreme topography, bounding faults and a major mountain range.

Cutter Basin is a completely separate and distinct groundwater basin with no hydrologic connection to the deposit.
